**Supplementary Table 5.** List of 681 reactions considered for comparison of their essentiality in AbyMBEL891 with those from *Acinetobacter baylyi* ADP1, which ultimately gave simulation-based prediction consistency of 72%. If essentiality of a reaction, either essential or non-essential, from AbyMBEL891 and ADP1 is the same, then they were considered consistent. This simulation was conducted under minimal medium with succinate as a sole carbon source. Information of each reaction is available in Supplementary Table 1.
